# Quality Management

APAC offers support in the fields of:

♦ **defining** a realistic and efficient **Project Quality Standard**

♦ **implementing** the Project Specific Requirements in an **effective and clear way**

♦ **improving** your **internal processes** based on the project experiences.

APAC also offers independent evaluation of:

♦ the **project management** process

♦ the **development** process

♦ the **software maintainability**

♦ the **process maturity** already achieved

♦ the **plausibility of the figures for the planning and results**.

APAC's process evaluation methods are based on **well-known Capability Maturity Models (CMM)**. After our evaluation the result is presented in a report. The report also contains a proposal for measures, which should be taken from our point of view.

Independent evaluation of the Software Maintainability with static analysis (representative sample is checked against a pre-defined metric set).

APAC Quality Management Modules

♦ Initialisation
♦ Workshops
♦ Planning
