# Test Management

APAC supports you during the entire testing process from defining user requirements to system acceptance

- Definition of the **test process**
- **Test effort estimation**
- **Test environment** definition and configuration
- **Test planning**
- **Requirements traceability and validation**
- **Test execution and evaluation**
- Overall **test management**

- **Staff training and coaching**
- Implementation of **standards and procedures**
- Selection and implementation of **source code control tools** and the **configuration management process**
- Selection and implementation of **bug tracking tools** and **processes**
- **Tool support**

1. Definition of clear, understandable and verifiable requirements

2. Definition of test cases, procedures and acceptance criteria per requirement

3. Execution of test cases and procedures including documentation of test results and errors with reference to the requirements

4. Evaluation of the test coverage relating to the requirements

Our approach can be used for small, or large and complex projects.

DIMAS (Distributed Management System on Lotus Notes) supports the testing process and the handling of requirements, test and error data.
