

# V&V Process Management

## As a basis for

### EC Declaration of Verification of Systems

needs to be prepared for each EATM System that is put into operation. The verification procedure needs to check the system for:

- ◆ Overall design
- ◆ Development and integration of the system
- ◆ Operational system integration
- ◆ Specific system maintenance provisions

### Adequate Safety Management

For adequate safety management of changes to an ATM System a Safety Assessment needs to be carried out. This will result in **Safety Requirements** addressing:

- ◆ System Requirements
- ◆ Requirements for the Development Process

If and how these requirements are fulfilled needs to be **constantly monitored and documented** throughout the development of a system.

## APAC V&V Process Management

assures a process that will fulfil the requirements specified by different sources.
